DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I – a device having first and second gates and a charge storage region all formed on a first insulating film on a principal surface of a substrate, as shown in figure 1, to which claims 1 and 5-8 are drawn.

Species II – a device having first and second gates formed on a principal surface of a semiconductor substrate via a first insulating film and a charge storage region formed on the principal surface of the substrate via a second insulating film, as shown in figure 11, to which claims 2-4 and 9-12 are drawn.

Species III – a device having a single gate formed on a principal surface of a substrate via a first insulating film and first and second charge storage regions formed on the principal surface of the substrate via a second insulating film, as shown in figure 28, to which claims 13-21 are drawn.

Species IV – a device having a first gate formed on a principal surface of a semiconductor substrate via a first insulating film, first and second charge storage regions formed on the principal surface of the substrate via second insulating films, and second and third gates formed over the first and second charge storage regions respectively via third insulating films, wherein the first and second charge storage regions are between the first and second gates and source and drain regions respectively, as shown in figures 32 or 48, to which claims 22-30 are drawn.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2815

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
